

Advanced IT Discovery and Dependency Mapping with Operational Insights

As IT infrastructure grows, companies face increasing complexity in managing assets across multiple locations and cloud environments. Traditional methods, like spreadsheets, quickly become inadequate for tracking this expansive IT estate. Clear visibility into your IT infrastructure is essential for driving efficiency in a digital enterprise.

Device42 empowers IT teams to increase visibility, agility, and control—all from a single dashboard. With advanced IT discovery and dependency mapping capabilities, Device42 helps accelerate and streamline the management of your entire IT environment, from legacy systems like mainframes to the latest cloud resources like Kubernetes, and everything in between.

A Reliable, Continuously Updated CMDB

Device42's built-in Configuration Management Database (CMDB) serves as a single source of truth for IT assets within your organization. It enables you to easily identify, manage, and verify all Configuration Items (CIs) in your environment, ensuring accuracy and control over your IT landscape.

Ensure Data Accuracy and Consistency Across EnrichAI®

To keep your data accurate and up-to-date, Device42's EnrichAI consolidates, standardizes, and enriches the discovered data from trusted sources, ensuring your CMDB serves as a single source of truth. This automation eliminates manual effort and delivers comprehensive insights to drive smarter decision-making across your hybrid IT environment.

The Value of Device42

- Agentlessly discover everything within your environment
- Increases data center efficiency
- Improves uptime
- Accelerates Mean-Time-to-Resolution (MTTR)
- Improves capacity planning predictability and resource utilization across your IT estate
- Increases IT team's productivity
- Helps reduce power consumption and identify potential thermal issues
- Improves management of resources and reduces CapEx

Additional Value

- Rapid implementation
- Faster time-to-value
- World-class support
- Easily integrate with existing IT tools using RESTful APIs and app connectors
- Helps with your sustainability goals

Simplify and Improve Decision-Making with InsightsAI

With EnrichAI ensuring data accuracy and freshness, Device42's InsightsAI takes it a step further by empowering you to get instant, reliable answers. Skip complex queries—just ask and receive precise insights into your IT environment through dynamic dashboards, out-of-the-box reports, and an intuitive chat-style interface.

Automated Discovery and Inventory

Device42 offers agentless, automated discovery of all your IT assets, providing comprehensive visibility into your entire hybrid IT estate. It captures and maintains inventory details for business applications, software, legacy systems, network and end-user devices, containers, storage arrays, and more—while mapping their critical relationships across on-premises, virtual, and cloud environments, increasing efficiency and promoting transparency throughout the organization. Start your free trial today and see what Device42 can do for you.

Explore cutting-edge discovery and dependency mapping capabilities for:

- IT Asset Management
- IT Operations Management
- IT Service Management
- Data Center Infrastructure Management
- Compliance and Audit
- Transformation and Migrations
- Sustainability and Power Reduction
